

Your front door on your phone

Whether you're in the backyard or on vacation, you may not be able to get to the door in person.

The Video Doorbell integrates seamlessly with the Alula app to put your front door at your fingertips.

- Includes two angle adjustment brackets and black faceplate

Peace of mind starts at your front door

One in four households will upgrade to a video doorbell this year.

Don't be the last one on your block with a blind buzzer.

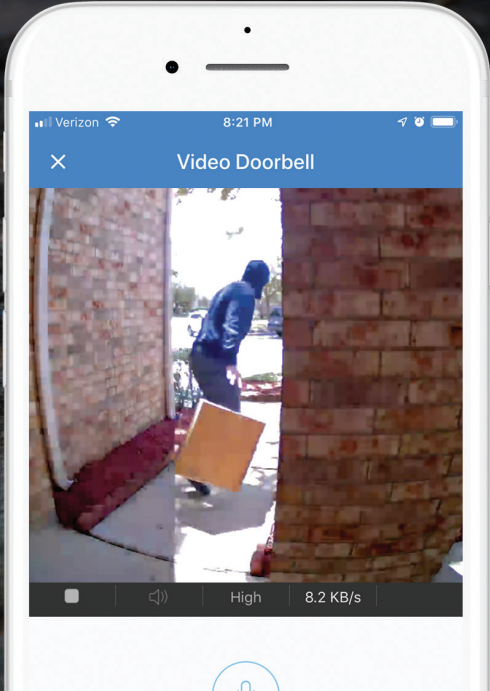

Tell porch pirates to walk the plank

Even a tiny package on the ground is easily viewed with the Alula Video Doorbell's 180-degree vertical field of view.

Included angle brackets allow you to capture the perfect view regardless of where your doorbell is in relation to your welcome mat.

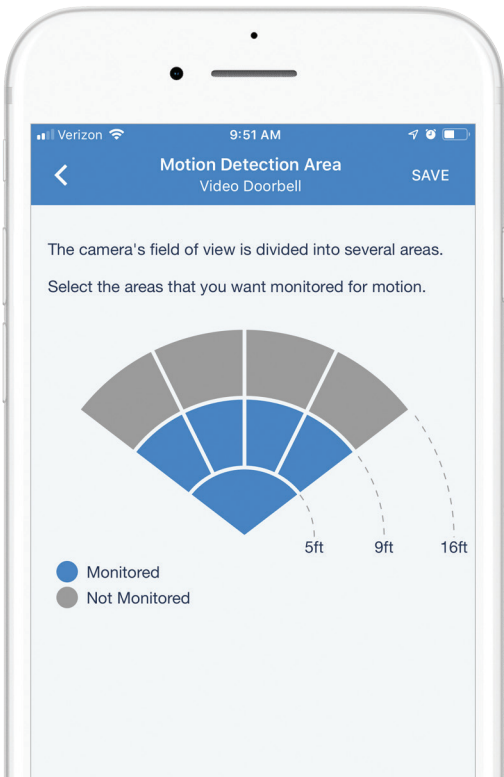

That way you'll always know when you have a delivery and keep an eye on it so you don't fall victim to porch pirates.

Perfect your view

With the Alula App, you can view activity at your front door in real-time. Using infrared motion detection, Video Doorbell senses when a person approaches and sends a notification to your phone.

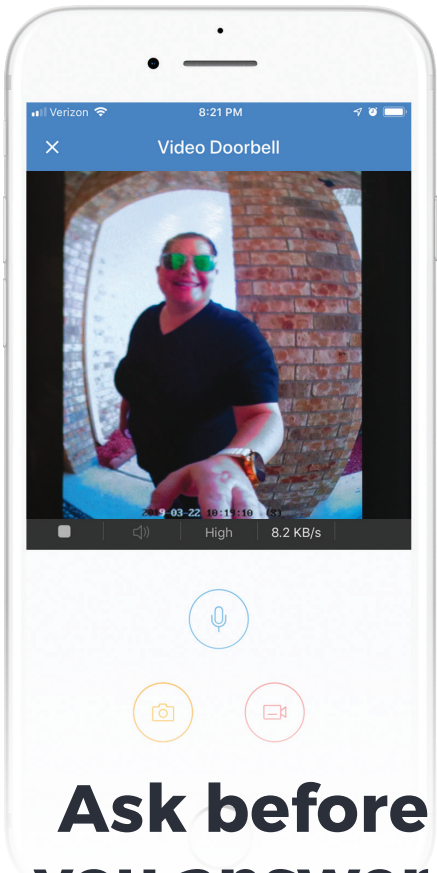

Customize motion detection range and zones so you have a digital record of everyone who approaches, whether they ring or not.

You can see clearly now

Neither snow nor rain nor gloom of night will stop Alula Video Doorbell from keeping watch.

The Alula Video Doorbell comes equipped with crisp, night vision up to 16 feet and a weatherproof design to deliver clear images in inclement weather.

Ask before you answer

See and speak to people in the Alula App before unlocking the door and putting yourself at risk.

With Alula's lightning-fast network, you won't experience the annoying lag common with other doorbell cameras. With Video Doorbell you can have a conversation without the stutter.

Never miss a single moment

Hybrid storage ensures you don't miss a single video clip.

The Alula Video Doorbell comes with a high endurance MicroSD card. With the Alula Network, your clips are automatically saved to the cloud and also backed-up locally.

You can even download clips to your phone and share them with anyone you choose.
